Subject Consultation on HealthCare Reform

Urgent     Return receipt     Sign     Encrypt

Sir,

I believe the present Health Care system is adequate and does not require a reform based on the following:

1. The present HealthCare system is built on the principle that people in the society take care of each other, not just themselves.

2. The projected future Health Care costs is unfounded and unjustified.

3. The HKSAR government has no place to run a government if health care is not provided freely to those in need of it when one requires of it freely without consideration of costs.

Protection of people and their right to live should not based on an economical decision but on the right to live and those who are more fortune to supporting those in need.

I wish to remain anonymous when your views are published.

Regards,
