Subject Health care reform suggestion

Urgent Return receipt Sign Encrypt

Dear Dr Chow Yat Ngok

I propose to increase profit tax rate to 17% and even 18% and put back tax on alcohol and beverage and increase hotel tax and increase tax on tobacco as sin tax for the supplementary healthcare financing. Please invest every year's reserve of SAR government and the last year reserve \$50 billion for health care reform for primary health care reform and preventive care service like stop smoking services and accident prevention, obesity prevention and exercise promotion and healthy diet education.

Another option is to increase all health care services fee. Please consider to increase substantially on hospital fee for each patient with industrial and motor vehicle accident to take back the full cost to treat and the administrative expenditure for every patients with industrial and motor vehicle accident as all these victims have the insurance recover. These not only relieve the public health care expenditure pressure for government to subsidize the insurance company and the industrial company and the drivers but provide more incentive to have more preventive measures to prevent industrial accident and motor vehicle accidents so that there will be less accident and less victims and patients to use public health care services. .

I object Personal Healthcare Reserve as the option for my consideration for supplementary healthcare financing in the Health care Reform.

Thank you for your kindest consideration.

Wish you every success on Health care reform consultation.
