Dear Sirs,

Actually I am 24 yrs old but i started paying Insurance for health, medical & life insurance since i was 16, plus the medical provided by the employer and the MPF, I don't see any necessity to put more money in the scheme, and many HK people are doing this since they were young, so it's important to put those resources to merge the public hospital and the private hospital asap, so that all people suffering from the disease which is not fatal, can be transferred to private care automatically.

in order to make the private hospital more bigger, i am sure they need more investment not only donations, why don't we give them more land and supports?

and i really hope so much & would like to see more Elderly home or day & night care home can be built next to the hospitals in the coming 50 years, I really wonder where can we live better when we become aged. Daily lives become much more expensive nowadays, what if we don't have children to support us when we become aged, the elderly home will become our final hope and shelter which it is time to think about it urgently.

Cecilia .
