1. The public sector needs to continue to provide high quality, efficient and accessible service to the following groups:

- a. low income
- b. under privileged
- c. chronic illness
- d. severe illness
- e. emergency and acute illness

Hence, the government needs to state how much money is going to inject into such kind of service.

2. In order to sustain point 1, social health insurance should be implemented. The amount to be contributed needs to be calculated in a transparent manner.

3. For those who are of higher income, they may also consider out of pocket and voluntary health insurance.

4. The report failed to provide details on the proposals. With such a report, the public will not be able to make an informed judgement. Suggest future consultation to provide more details.

5. The advisory committee does not contain patients or carers representative. How can this be fair? Suggest inviting patients and carers representative in the committee.
