Subject Equity for medical care

Urgent Return receipt Sign Encrypt

We are a group of doctors working in public hospitals. With the implementation of the mandatory insurance / saving system, we have great concern about the future running and operation in public hospitals. If those having an account will have priority including consultation and investigations, those without will have to wait for even a longer period even when early appointment is indicated. Equity for medical care is jeopardized. In fact, waiting list is already unacceptably long these day. We are afraid that with such a system, it will even be longer for the underprivileged.
