Dear Sir,

Why a professional doctor not GP whom office in Central and his consultation fee plus medicine only HK\$600.00 (six hundred) for 3 months. He earns money. He needs to pay for the rent. He employs many nurses. He needs to pay for the drugs. Why his fees are cheaper than out-patients of Government clinic? Why? How? He has many patients.

If Government compulsory to save our money for medical treatment. We have the right to use the money anywhere. We have the right to select the best treatment in the world not only Hong Kong. Why not compulsory to save money for solicitors?

Government always said our doctor or medical technology is one of the best in the world. Can you give us more evidence? In fact many disorders can be treated easily but in Hong Kong no one knows how to treat it. Of course this will waste many money.

We use more than five million dollars to train a doctor and when we sick we need to pay them. Why? Why use government money to train someone whom is young, clever and health? Why not they pay for themselves? Then we can save many money. If they do not have the money we can lend for them of course with interest.

In fact Hong Kong needs more doctors and hospitals. Why not recognize others country doctors' qualifications. When the Hong Kong doctors face competition their price will be more reasonable and the quality will be better. Is it our doctor is too inept they need many protections. Government should open the market at once.

Increase more medicine degrees in our universities.

Government is too protect the right and interest of local doctors. In fact as a Government should protect the patients.

Please give us figures which compare treatment cost and period of different countries with Hong Kong.

Health care system has been talked for many decades and no any action. It is because every times a good system proposal doctors shall try their best to destroy it. Doctors in Hong Kong only concern their own interest Money Money. Most of them are only professional prostitutes.

In fact we have money but not enough doctors. If all doctors in Hong Kong died only one alive still no one will consult him if he cannot treat. No one will pay for him.

Government should send Hong Kong people to others countries to treat if others countries treatment cost is cheaper than Hong Kong.

Government shall increase the ability, moral and number of Doctors. We shall have more laws to govern doctors' fares, moral and ability. The most important is punishment. Hong Kong doctors have a license to kill and have all the patients' money.

Government should provide more night professional doctor services for public. Please do not always and totally protect the income of private doctors. They already have earned the top treatment fares in the world and provided primitive services.

Cordially Regards,
The Hong Kong people.
